

NZ Sourced Forage and Novelty Feed Declaration

Coverage

This form outlines the minimum information for the transfer of locally grown or novelty feeds only. It is not intended to be used for feeds purchased from Feed manufacturers and/or Importers (e.g. compound meals, grains, PKE, tapioca, and similar). These merchants should supply you with a specific declaration for each feed type in their product range.

Forage feeds	Feeds sourced from New Zealand sources other than the dairy platform or 'run off block' not under the control of the person(s) managing the animals that will receive the feed. Includes conserved pasture or crops such as hay, baleage, silage, maize, etc.
Novelty feeds	Surplus, downgraded, or otherwise unsaleable food products or by-products primarily intended for human consumption e.g. biscuits, bread, cereals, pastries, lollies, vegetables, fruit, juices, and sauces.

Feed details

Feed type	Provide a description of the feed. Try to be as describing as possible and avoid generic terms such as silage or food waste. Examples include hay, grass silage, apple pomace, biscuits, etc.
Source	This will depend on the type of feed. For forage crops such as grass or maize silage, note the address where the feed was grown, including paddock/ block details where available. For food processing by-products, record the name and location of the processing plant, orchard, etc.
Quantity	Total amount of feed delivered using appropriate measurement units, e.g. bales, bins, tonnes, kgs, etc.
Carrier details	Record the name of the carrier. Where bulk delivery trucks are used for a range of products (both feed and non-feed) there is potential for feed contamination. Where contamination is evident the consignment should be rejected.
Delivery date(s)	Enter the date of delivery. Where several consignments of the <u>same product</u> from the <u>same source</u> are delivered over an extended period, a date range may be used.
Intended use	Record the stock class the feed is intended for e.g. lactating animals, dry stock, calves, etc. Note that some feeds may not be suitable for cows producing milk for supply.

Feed Suitability

Land use	Where feed is produced on land used for disposal of meat, fish, or other industrial wastes, note the name of the company producing or spreading the waste. In these cases the feed supplier must provide evidence that the waste is spread in accordance with an approved management plan, and the waste product has been approved for use by Dairy Processor.						
Feed treatments	<p>Spray/treatment residues are a potential source of milk contamination with agrichemicals. Where forage or fruit/vegetable crops have been treated prior or subsequent to harvest, it must not be fed to lactating animals prior to the expiry of any withholding period for the treatment(s).</p> <p>Enter additional treatment information below:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td style="height: 20px;"> </td></tr> <tr><td style="height: 20px;"> </td></tr> <tr><td style="height: 20px;"> </td></tr> <tr><td style="height: 20px;"> </td></tr> <tr><td style="height: 20px;"> </td></tr> <tr><td style="height: 20px;"> </td></tr> </table>						
Other contaminants	Some feed products can modify milk flavour and functional properties. Fruits and vegetables in particular can result in milk taints and must be used with care.						

NZ Sourced Forage and Novelty Feed Declaration

This form outlines the minimum information requirement for the transfer of locally grown and novelty feeds. Refer to the reverse of this form for definitions and guidance on use.
